

Achieve Peak Organizational Efficiency with a Lean Kaizen

Is your organization in need of boosting its efficiency and effectiveness as quickly as possible? Perhaps you have some of these common organizational challenges:

- Inefficient processes
- Excessive costs for your services or programs
- Long waits and delays
- Workplace disorganization/wasted space

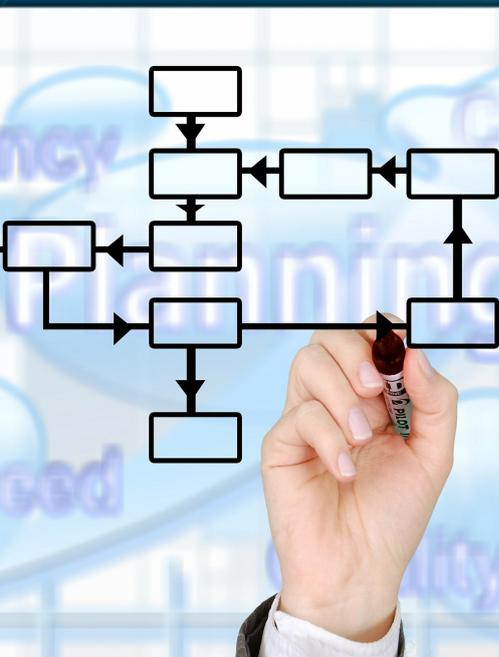

Across the country, health focused organizations are applying Lean methods and principles to greatly improve their organizations and ultimately change the lives of those they serve. Our Lean Kaizen Program can help you quickly start addressing some of your most vexing challenges.

How We Can Help

Our Lean experts will create a customized kaizen event (a 4-day rapid cycle improvement project that yields immediate results) with on-site support and facilitation to help guide your organization through the improvement process. By tailoring our services to meet your exact needs, we will address many of the day-to-day problems your organization faces by providing **sustainable solutions**. Our process helps solve the wide variety of problems and challenges that health-focused organizations face in today's rapidly changing environment.

Why Not Use Another Improvement Approach?

Lean kaizens are designed to most efficiently use your staff's limited time. By working with our facilitators over 4 consecutive days, your staff will accomplish the same amount of progress as a typical QI team that meets weekly over 9 months to complete a QI project. Further, the changes will be tested and implemented immediately versus spread over months, giving your staff and organization some crucial "quick wins" to accelerate your organization's ability to continuously improve.

Cost

\$4,950* (limited-time offer)

- Includes: initial consultation, 2 to 3 prep work calls, on-site 4-day kaizen with a Lean facilitator, and follow-up calls at 5 and 10 weeks with your facilitator to close out the project and assure sustainability.

**NC local and state public health departments and coalitions qualify for this reduced price thanks to a generous grant from The Duke Endowment.*
