

New N.C. Cancer Data and Resource Guide

Cancer has been the leading cause of death in North Carolina since 2009, when it surpassed heart attack and stroke. "The psychological, physical and emotional burden of cancer on our residents is profound," said State Health Director Elizabeth Tilson, MD. "We must do everything that we can to reduce this burden."

"Reducing the Burden of Cancer in North Carolina: A Data and Resource Guide for Communities to Fight Cancer", details where cancer is most concentrated in North Carolina, which population groups experience the highest burden of cancer, and what public health professionals and partnering agencies can do to reduce the burden of cancer on individuals, families and others in North Carolina.

Reducing the Burden of Cancer in North Carolina is designed to serve as a companion to the *A Call to Action, N.C. Comprehensive Cancer Control 2014-2020* (N.C. Cancer Plan.) The guide provides critical data on six specific cancers prioritized in the N.C. Cancer Plan: female breast, cervical, colorectal, lung, prostate and melanoma skin cancer.
